# OUR EARTH The Earth

- The earth is a planet.
- The earth is the only planet that has life.
- A large portion of the earth is covered by water than land.
- It is also called the Blue Planet.

- A planet is a heavenly body that revolves around the sun.
- The layer of air around the earth is called atmosphere.
- The earth has a family too. It has seven planets in its family.
- The sun and eight planets form the solar system.

## **Shape of the Earth**

- Hundreds years ago people feared to travel long distances.
- They believed the Earth was flat like a square with edges. They feared that if they travelled to far off lands, then they would fall off.
- But some learned men like Copernicus and Aristotle said that the earth was not flat at all but was like ball without any edges.

**Who proved the Actual shape of the Earth**

- Ferdinand Magellan went on a cruise.
- He started from Spain and sailed in the same direction for three years.
- He sailed west and reached the same point from where he had started. In this way he proved that the earth was not flat but round in shape.

# Horizon

- Horizon is the place where the land or the sea seems to meet the sky.

# Coast

- Coast is the place where the land and the sea meet.
